Floating Ball Valves

Trunnion Mounted Ball Valves

Double Block & Bleed Valves

Global quality. Total reliability.

Two recurrent claims in present-day corporate strategies. But the transition from words to actions demands tangible measures. Specialization and organization underlie what amounts to a "quality culture".

a set of specific rules governing every stage of production. An operating model that is good to have in a partner who bears the responsibility of supplying valves that are essential to plant safety and regulation.

--	---

The image shows a TUV Nord logo at the top right. Below it is a certificate document. The document has a blue header with 'TUV NORD' and a blue circular seal with 'TÜV NORD'. The main title is 'CERTIFICATE'. It details a certification for 'The Certification Body of TÜV NORD Systems GmbH & Co. KG' to 'certify that the company B.F.E. S.p.a., I-24061 Albano S. Alessandro (BG) I-23842 Bosisio Parini (LC)' has been verified and recognized as meeting the requirements of 'Valves, strainers and spacer spools according to the rules of AD 2000-Merkblatt HPD and TRD 201 Certificate-no.: 07-202-0080-HP-282712'. It also states that 'The range of operation and details of the inspection can be taken from our Report-no.: M11466/12/L (0800A03\_282712 / 6109565646)' and that 'This certificate is valid until 01 October 2015'. There is handwritten signature over the date. At the bottom, there is a small note: 'Hannover, 2015-10-12' and 'TUV NORD Systems GmbH & Co. KG'.

The image shows a TUV Nord logo at the top right, consisting of the word "TUV NORD" in blue with a blue arrow graphic above it. Below the logo is a certificate document. The document has a large "CERTIFICATE" title at the top. It lists "B.F.E.S. s.p.A." as the company, "1 - 24061 Albano S. Alessandro (BG), Italy" as the address, and "I-23842 Bosiolo Patini (LC)" as the location. The text states that the company has been certified as a material manufacturer according to AD 2000-Merkblatt W0 and TRD 100. A "Letter of Confirmation" number, 9060AFAR\_140712, is provided. The certificate is valid until October 2015. A handwritten signature is present over the bottom right of the document.

# DESIGN, CONSTRUCTION, MARKING FOR FLOATING BALL VALVES

## PRODUCT OVERVIEW

BFE manufactures the most complete line of quality ball valves, and can provide the exact ball valves and actuators to meet the most demanding application requirements.

Our Floating Ball Valves are available in an extensive range of designs, materials, sizes and pressure classes and are in full conformance with ANSI, API and NACE specifications.

All ball valves are designed in accordance with ASME B16.34 and API 608 and where applicable with API 6D or BS EN ISO 17292.

The BFE family of floating ball valves provides positive shut-off of fluids and gases under extreme service conditions.

BFE uses only high-quality materials inspected & tested to International Standards and utilizes advanced manufacturing technology with special emphasis on safety, quality, and long service life of our products, to ensure that our clients receive the "best in class" products available from us at a competitive price and delivered on time.

Forging material has increased strength under maximum rated operation pressure compared with cast.

Other forging properties include greater impact resistance, resistance to fatigue cracking, particularly when cycling at either high or cryogenic temperature. Overdesigned wall thickness and adaptation of high strength tie bolts convenient for valve maintenance and sufficient pipe stress.

The internal parts of valve are carefully designed and selected to ensure reliability under many conditions.

Since a variety of materials are available, BFE valves can be used with various fluids and gases including petroleum based oils and some water glycols.

The design of BFE ball valves is based on the "floating ball" principle which allows the ball to turn freely between the ball seals.

A positive seal is attained by fluid pressure acting on the upstream surface of the ball and producing a constant uniform contact between the downstream ball seal and the ball.

The ball is operated by a sealed spindle with a projecting square end to which the control handle or optional actuator is attached.

Ball valves are intended to be used as on/off flow control devices and are not to be used to throttle fluid flow. The valves should always be either fully open or closed.

BFE Floating Ball Valve design is developed using the latest software based analysis tools.

At the design stage, all projects are analysed using 3D solid modelling tools. Benefits include reduction of development time and cost, improved product quality, and ability to solve field problems for customers. Product flexibility and accuracy is assured.

Finite Element Analysis (FEA) is a very important step at the development stage to ensure the best possible performance requirements.

Valves operational problems, pressure/temperature-related deformations and flow-related forces within a valve can be evaluated.

BFE uses the FEA for predicting failure due to unknown stresses by showing problem areas in a material and allowing designers to see all of the theoretical stresses within.

During any analysis project, it is the responsibility of the BFE analyst to verify analysis results. Understanding the response of a structure or manufactured product allows effective design decisions to be made in developing structures and products that are functional, meet all engineering requirements, and can be manufactured and assembled.

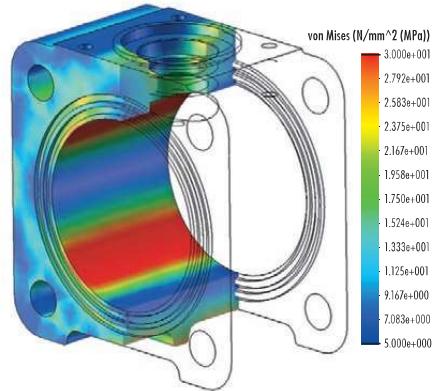

Computational Fluid Dynamics (CFD) is used to simulate operating flow conditions.

Evaluation of Valve CV coefficient and convective heat transfer coefficient takes place at the design stage.

## MAIN FEATURES

### Fire-Safe Test Approved

BFE floating ball valves are designed in accordance with API 607 & API SPEC 6FA. When non-metal seats are destroyed in a fire, the upstream medium pressure push the ball into the downstream metal seat lip to cut off the

line fluid and prevent internal leakage due to a secondary metal-to-metal seals. When the first soft seal is damaged, body/gland/stem gasket will and prevent external fluid leakage.

### Double Body Gasket

All BFE floating ball valves are equipped with two body gaskets. The first body gasket is a soft material and the second is graphite (if not otherwise required), this combination assures the best seal characteristic in corrosive service as a fire safe design.

### Antic-Static Device

In order to prevent static electricity, a static-conduction spring is used between the stem and the ball.

### Anti Blow-Out Proof Stem

The stem is designed with integral T-Type shoulder to provide blow-out proof protection. The design assures that the stem cannot be blown out of the body if the gland is removed while the valve is under pressure.

### Controlled Stem & Stuffing Box Finish

Stem and stuffing box finish machining is a key point of control. The stem is made by cold rolling and stem surface finish is Ra=0.4, to ensure the seal. The stuffing box surface is Ra=1.6 for better sealing performance.

### Solid Ball

The solid ball used by BFE provides straight through flow and real full-port performance characteristics. Hollow ball or cored cavity ball are not used for BFE products.

## Longevity of Life

Special consideration was devoted to the attainment of enhanced life and operation of our valve throughout design, development, testing and manufacturing stages. Valve designs combined with the selection of advanced materials are such that long periods of inactivity should not affect the operation.

## Low Torque Output

Seat designs, stem-bearing system and stem seal arrangements ensure consistent minimal torque values.

## Flow Capacity

Valve design allows for high flow capacity in liquid or gas services regardless of whether the media is clean or dirty. Full port valves allow for pigging and ensure maximum flow capacity.

## Field Repairable

Simple user friendly design allows for quick and

easy part replacement requiring minimal "Down Time".

## ISO Flange Integrated in the Body Design

ISO 5211 mounting always integrated in the forged body as standard design.

## INSPECTION AND TESTING

Every valve is subjected on routine base to different non-destructive testing, like the dye penetrant test on butt weld ends, on all hard faced and cladding areas.

Non-destructive test are also carried out on the critical areas as defined by ASME B16.34.

Optional examinations like:

Radiographic

Magnetic particles

Ultrasonic

Helium leak test

Personnel performing NDT are trained and qualified to EN 473 / ASNT-SNT-TG-1A.

Every valve is subject to a pressure test in

accordance with the standard API 598 or BS 6755 Part.1.

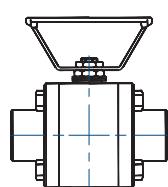

The rated pressure for the applicable pressure class is in accordance with ASME B16.34 and EN 12516-1/-2.

## MARKING AND IDENTIFICATION

Each valve is identified on proper name plate and on valve body as required by MSS SP-25 and ASME B16.34. Name plate carries all information on rating, size, valve body and trim material, customer tags.

On body, marking includes material designations (per ASTM) and heat code and of course the trade mark.

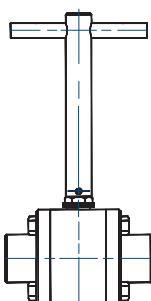

# AVAILABLE OPTIONS

### OVAL SAFETY HANDLE

Oval safety handwheels are used where the standard lever can be accidentally bumped open or closed.

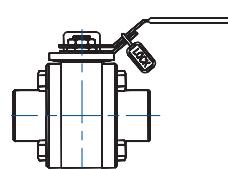

The oval safety handle can be either carbon steel or stainless steel.

### "T"-HANDLE

"T"-handle is usually used where access to the valve is limited and can be supplied for vertical or horizontal valve installation.

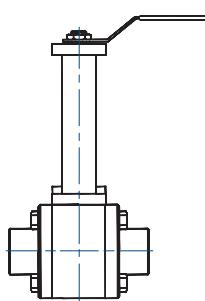

The "T"-handle can be either carbon steel or stainless steel.

### LOCKING DEVICE

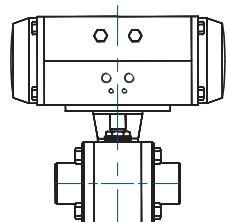

Locking device is supplied as option in order to prevent unauthorized opening/closing.

BFE locking device can lock the valve in either the open or closed position and cannot be breached by removing the lever.

### EXTENDED BONNET FOR INSULATION

BFE floating ball valve can be supplied with an extended bonnet to allow insulation up to 3 inches (76mm) thick. The insulation can be installed all around the valve without blocking access to the valve valve or other operator.

### EASY AUTOMATION - PNEUMATIC ACTUATOR

BFE floating ball valves are available with pre-assembled valve/pneumatic actuator packages. In any case BFE standard design allows users to direct mount most brands of valve actuators with the need of an additional bracket always available in the factory.

#### PRODUCT FEATURES:

- Live Loaded Stem Seal.
- Phosphate coated carbon steel valve body/closure.
- ISO 5211 mounting integrated in the forged body.
- Anti-static Device.
- Blow-out Proof stem.
- Fire-Safe.
- Cavity Pressure relief seat design.
- Standard O-Rings in Viton with AED properties.

#### PRODUCT FEATURES:

- Live Loaded Stem Seal.
- ISO 5211 mounting integrated in the forged body.
- Anti-static Device.
- Blow-out Proof stem.
- Fire-Safe.
- Pressure equalization hole on the ball.

#### DESIGN TYPE 1

##### 3-PIECE & ENCAPSULATED SEAT

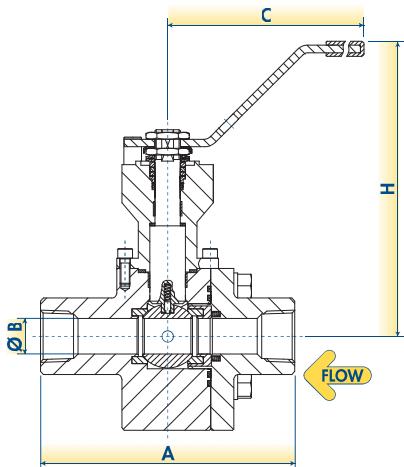

Standard design available with threaded ends.  
Socked-weld and butt-welding ends are available only with nipple.

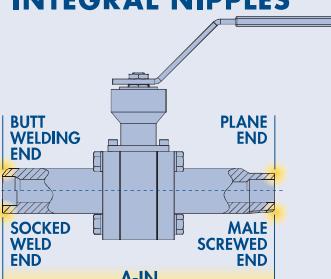

#### DESIGN TYPE 2

##### 2-PIECE & ENCAPSULATED SEAT

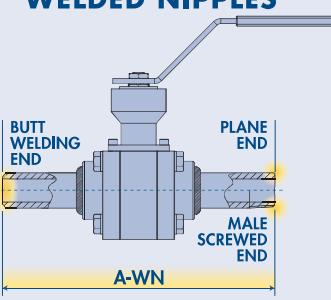

Standard design available with threaded ends.  
Socked-weld and butt-welding ends are available only with nipple.

#### INTEGRAL NIPPLES

#### WELDED NIPPLES

#### PRODUCT FEATURES:

- Live Loaded Stem Seal.
- ISO 5211 mounting integrated in the forged body.
- Anti-static Device.
- Blow-out Proof stem.
- Fire-Safe.
- Pressure equalization hole on the ball.

#### DESIGN TYPE 1

##### 3-PIECE & ENCAPSULATED SEAT

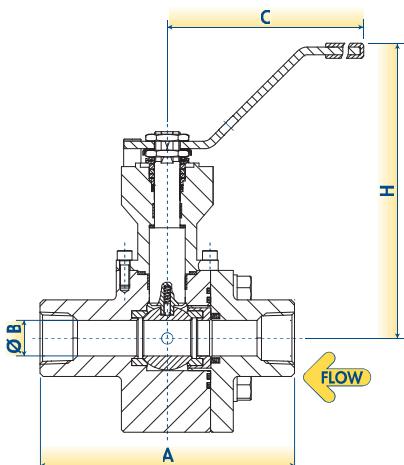

Standard design available with threaded ends.  
Socked-weld and butt-welding ends are available only with nipple.

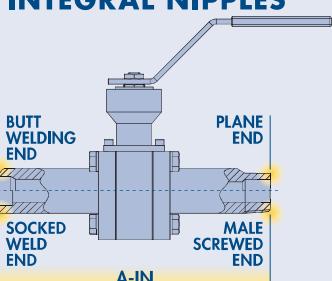

#### DESIGN TYPE 2

##### 2-PIECE & ENCAPSULATED SEAT

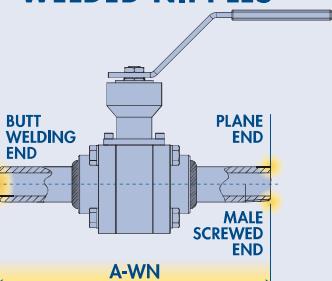

Standard design available with threaded ends.  
Socked-weld and butt-welding ends are available only with nipple.

#### INTEGRAL NIPPLES

#### WELDED NIPPLES

#### PRODUCT FEATURES:

- Live Loaded Stem Seal.
- Phosphate coated carbon steel valve body/closure.
- ISO 5211 mounting integrated in the forged body.
- Anti-static Device.
- Blow-out Proof stem.
- Fire-Safe.
- Cavity Pressure relief seat design.

# VALVE SEAT & GASKET MATERIAL SELECTION GUIDE

Choosing the right seat material is the most important decision in ball valve selection. Use the Pressure/Temperature rating chart for the most common seat materials and ask us in case of special material or applications.

## HOW TO USE THIS CHART

- Please note that the ratings are referred to the valve seats. Do not use these ratings for the valve class selections.
- All rating charts have been provided for non-shock fluid service.
- The choice of the seat material is limited by characteristics of the service fluid, working pressures, fluid velocity, and operational frequency of the valve. Choosing the right seat material is the most important decision in ball valve selection. Use the pressure/temperature rating charts for the most common seat materials and ask us in case of special material or applications.
- The BFE SEAL CODE (3 digits) is designed to cover essential features of BFE seats and gasket material, the code is marked on the valve name plate in order to easily allow customers to identify the internal soft material.

DIGIT-1 – INSERT SEAT MATERIAL

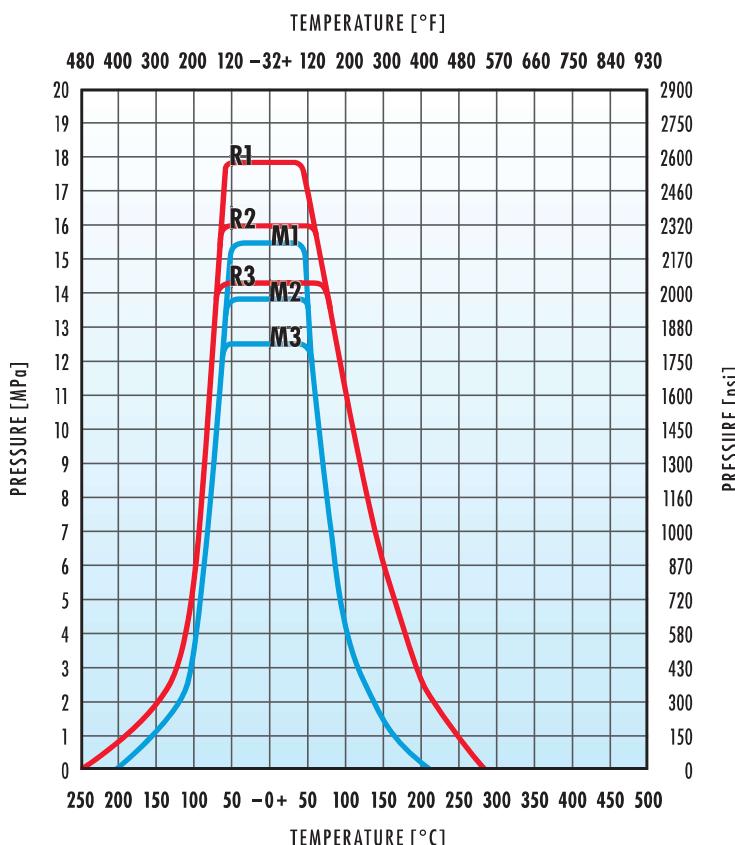

DIGIT-2 – EMERGENCY BODY SEAL

DIGIT-3 – FIRST BODY SEAL

Example: SEAL CODE "RGR":  
INSERT SEAT MATERIAL = RPTFE CARBO-GRAFITE  
EMERGENCY BODY SEAL = GRAPHITE  
FIRST BODY SEAL = RPTFE CARBO-GRAFITE

## PLANE SEAT PRESSURE/TEMPERATURE RATING (SWING-OUT VALVES)

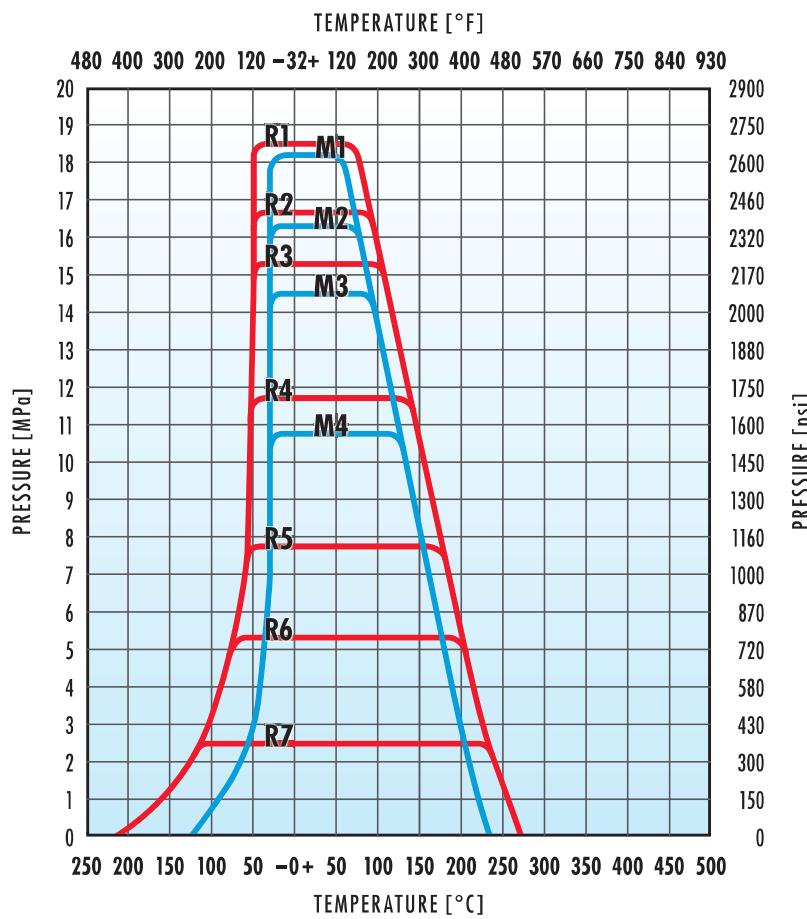

PLEASE NOTE THAT THE FOLLOWING RATINGS ARE REFERRED TO THE VALVE SEATS. DO NOT USE THIS RATINGS FOR THE VALVE CLASS SELECTION.

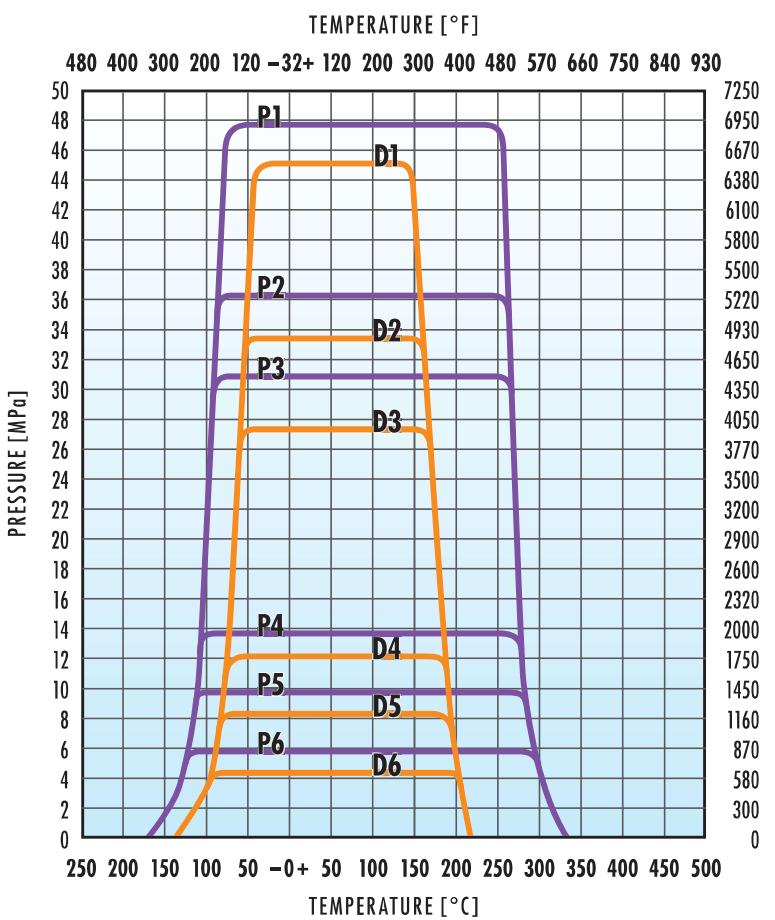

SEAT RATING CURVE ID	VALVE NPS FULL BORE	VALVE NPS REDUCED BORE
R1	3/8" & 1/2"	1/2" & 3/4"
R2	3/4" & 1"	1" & 1-1/4"
R3	1-1/4" & 1-1/2"	1-1/2" & 2"
M1	3/8" & 1/2"	1/2" & 3/4"
M2	3/4" & 1"	1" & 1-1/4"
M3	1-1/4" & 1-1/2"	1-1/2" & 2"

R - RPTFE CARBON-GRAFITE  
M - VIRGIN PTFE

## ENCAPSULATED SEAT PRESSURE/TEMPERATURE RATING

PLEASE NOTE THAT THE FOLLOWING RATINGS ARE REFERRED TO THE VALVE SEATS. DO NOT USE THIS RATINGS FOR THE VALVE CLASS SELECTION.

The following table shows the most used materials, their characteristics, application (seat or gasket) and the BFE ID.

SEAL MATERIAL	MATERIALS CHARACTERISTICS	BFE SYMBOL	AVAILABLE MATERIAL FOR SEAT	AVAILABLE MATERIAL FOR GASKET
			BFE SEAL CODE DIGIT 1	BFE SEAL CODE DIGIT 2/3
VIRGIN PTFE	Polytetrafluoroethylene is a Fluorocarbon-based polymer. This seating material has excellent chemical resistance and low coefficient of friction. PTFE is non-contaminating and accepted by FDA for use in food services. Not recommended for liquid alkalis and fluorine.	M	YES	YES
RPTFE 25% CARBO-GRAFITE	RPTFE's mechanical properties are enhanced by adding percentage of filler material to provide improved strength, stability and wear resistance.	R	YES	YES
"RPTFE 25%GLASS"	25% Glass Filled PTFE (Reinforced Polytetrafluoroethylene) is similar to RPTFE- CARBO-GRAFITE but with even better resistance to wear and deformation under load. Strongly suggested for Sea-Water Service.	A	YES	YES
RPTFE 60% BRONZE	This material exhibits a unique combination of heat resistance and low friction together with outstanding chemical and good electrical properties. No moisture absorption, high arc resistance, and is self lubricating with a low coefficient of friction.	B	YES	NO
PEEK	Polyetheretherketone high temperature semi rigid elastomer. Best suited for high pressure and temperature service. Also offers very good corrosion resistance.	P	YES	NO
DEVLON-V	Devlon-V (special Nylon produced by Devol Engineering Ltd) offers very good performances regarding the maximum allowable pressure and excellent elasticity.	D	YES	NO
KEL-F	PCTFE (Polychlorotrifluoroethylene) is a fluorocarbon based polymer. It offers a unique combination of physical and mechanical properties non-flammability, chemical resistance, and near zero moisture absorption. It is suitable for cryogenic applications.	K	YES	NO
UHMWP	Ultra-High Molecular Weight Polyethylene. Ideal for use in lowlevel radiation service. This seat also meets the requirements of the tobacco industry where TFE is prohibited and it offers an excellent resistance to abrasive media.	U	YES	YES
VESPEL	Vespel is manufactured by DuPont using high performance polyimide resin. Performs well in a variety of chemical environments and a variety of industrial fluids (fuels, oils, lubricants) at elevated temperatures. Temperature range can operate continuously from cryogenic to high temperature. Performs well in radio-active environments, even at relatively high dosage rates of exposure levels.	V	YES	NO
VITON	Standard material for O-RING.	V	NO	YES
SILICON	Silicon is a semi-organic elastomer with outstanding resistance to low temperatures. Silicon also has good resistance to compression set. Low physical strength and abrasion resistance combined with high friction limit silicone to low pressure applications. Silicone is used primarily for dry heat static seals.	S	NO	YES
SPRING ENERGIZED TFE BASED	"Spring energised plastic seals ( Lip-Seal ) from PTFE and PTFE compounds, with standard and special profiles for temperature from -196°C to +260°C, pressure range from high pressure to vacuum. Spring standard material ASTM F1058 R30003. Alternative spring materials are available and other elastomer compounds are available to suit special applications/media."	E	NO	YES
TUNGSTEN CARBIDE COATING	For liquid or gas services with high presence of solids or in any case where extreme hardness and wear resistance is required. Tungsten carbide itself is practically inert and extremely strong. Any attack is usually on the binder. Not suitable when small presence of caustic soda is expected.	W	YES	N.A.
CHROME CARBIDE COATING	For liquid or gas services with small presence of solids. Not suitable when small presence of caustic soda is expected.	C	YES	N.A.
GRAPHITE	Hard carbon with excellent heat resistance. Not suitable as seat material when presence of oxidized service is expected.	G	YES	YES
OTHER	For other materials please ask to BFE.	-	-	-

## CRYOGENIC CONFIGURATION

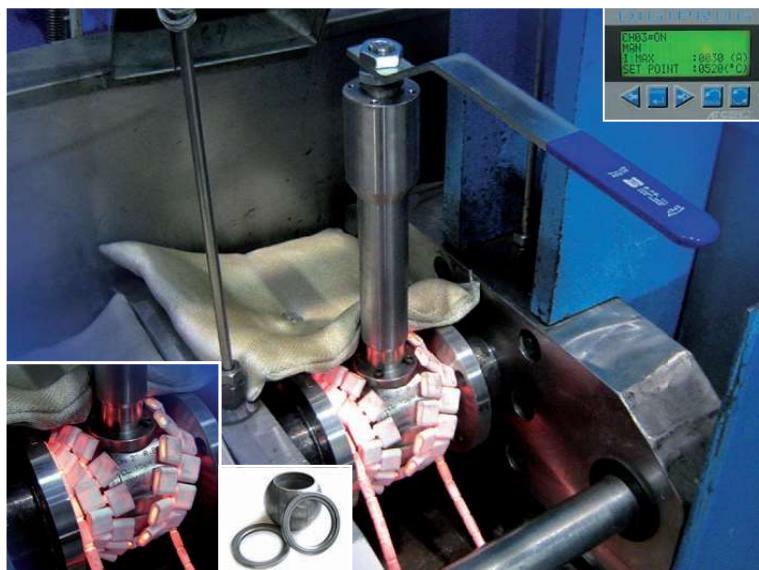

BFE floating ball valves designated for use in cryogenic temperatures to minus 196°C (320°F) offer superior service life in tough and demanding applications.

The design incorporates a vent hole drilled on the upstream side of the ball, eliminating the possibility of trapping liquid or gas in the cavity and thereby preventing dangerous overpressure due to thermal expansion.

The bonnet extension keeps heat transfer down, the packing frost free and the operational torque low.

Selection of materials of construction is optimized for the intended service. Extended bonnets are provided to ensure zero leakage.

## METAL SEATED CONFIGURATION

BFE metal seated floating ball valves are designed for high temperature applications and for abrasive services:

- HIGH TEMPERATURE:** BFE floating ball valves designated for high temperature operation offer superior service life for any kind of fluid compatible with graphite. BFE Metal to Metal sealed ball valves employ a special spring loaded seat design, which would absorb the heat expansion of valve components, so that the valve would not get stuck due to the high temperature.

- ABRASIVE SERVICE:** The valve is highly resistant to erosion, very effective in the handling of fluids containing abrasives and any dirty media and maintenance free. The valve is provided with Tungsten Carbide coated metal seats to avoid the erosion of soft seats. Soft seat must not be used for abrasive service.

## OTHER SPECIAL SERVICES

SERVICE	DESCRIPTION & VALVE FEATURES
OXYGEN GAS	BFE floating ball valves designated for Oxygen Service are prepared and cleaned to standards required for the safe operation of Oxygen Service equipment and product purity. Acetal Resin (Delrin) seats and Nylatron seals must not be used in oxygen service.
VACUUM	BFE floating ball valves can be used with standard design in "Medium Vacuum" range (up to 0.001 Torr). Specially prepared and tested valves can be used through the "High Vacuum" range. Valves with reinforced TFE, carbon-graphite or metal seats are not recommended for vacuum service.
CHLORINE	BFE floating ball valves designated for Chlorine Service are in stainless steel material (Grade 304 or 316) or other alloys such as Monel or Hastelloy C. Reinforced PTFE can be used for the chlorine service. Due the high coefficient of expansion the ball vent hole is required. They are prepared and cleaned to standards required.
ALIMENTARY	The BFE special "cavity filled" design (standard design for alimentary service valves) offer the best way to maintain the body cavity clean and empty from impurities. BFE floating ball valves designated for alimentary service are also prepared and cleaned to standards required.
SLURRY & MUD	The BFE special "cavity filled" design (standard design for slurry service valves) offer the best way to maintain the body cavity empty from slurry and safe from phase transition to the solid state (immobilizing the valve).
RUBBER POLYMERS	The BFE special "cavity filled" design (standard design for polymers service valves) offer the best way to maintain the body cavity empty from fluid and safe from possible polymerization in place (immobilizing the valve).
HYDROGEN PEROXIDE	Ball Valve are recommended for hydrogen peroxide service. The valve is nitrogen leak tested and prepared and cleaned to standards required. The ball vent hole is required.

# ■ GENERAL SALE CONDITIONS

## QUOTATION VALIDITY

Unless otherwise agreed, quotations are valid for four weeks from date of issue.

The delivery terms are always "ex-works" unless otherwise stated.

Prices and sale conditions can be changed without any previous notice.

## ORDERS ACCEPTANCE

Orders are considered accepted at our general sale conditions clearly mentioned on order acknowledgment.

## GOODS DELIVERY

The Company does not accept any responsibility for delays in delivery which are always intended as indicative and not binding. Transport risks are at receiver's charge also in case of CIF delivery.

## GUARANTEE

The Company guarantees all its products, from material and/or manufacturing defects, to be used as recommended by standards, and in accordance with approved piping practice and technique, for a period of one year from shipping date, unless otherwise agreed.

The Company liability covers eventual "free of charge" replacements for defective parts or products, providing it has not failed in the observance of above mentioned conditions and in use in compliance with standards, and, anyway, after return of defective goods. Any other liability, neither objective nor subjective will be accepted.

## CLAIMS AND ORDER CANCELLATIONS

Claims will be considered only if made within 10 days from goods receipt.

Partial or complete cancellations of order can be accepted only upon previous agreement or by written consent and, however, not later than 15 days from order date.

Any controversy will be handled by the Court of Milan.

Dimensions on the catalogue are indicative.

B.F.E. S.r.l. reserves the right to make all necessary changes without notice.
